INTERMEDIATE - SENIOR PHP DEVELOPER
(Depending on experience)

Competitive annual salary package + staff perks
Flexible, social and fun work environment
Work alongside other top developers in a collaborative environment
Huge opportunity to build a strong career with our thriving agency

 Little Giant has quickly grown to become a leading digital agency, offering digital strategy, marketing, creative, design & development services for some of New Zealand's top companies. We are a 20 person strong agency based in Auckland CBD.

Why Little Giant?

- Rewarding annual salary package with unlimited opportunities for future growth. Our company is expanding rapidly and we have big plans, this is a unique opportunity to be part of something big, at the ground level.

- Modern work environment with many staff perks including free food, booze, coffee etc. We invest heavily to ensure our staff work in the best environment possible.

- Social and fun company culture, enjoy where you work and who you work with. We have carefully built a fun and social team that will make you feel right at home. Come join the Little Giant family.

- Work alongside an industry leading team of enthusiastic professionals - focused on creating award worthy work. We have designed a very flat company structure with purely talented and experienced individuals. .

- Work in a beautiful, creative & spacious office. Our offices are located in Auckland CBD, it is a large character space with natural light, playful furnishings & state of the art workstations. We have worked hard to design a creative environment that our team looks forward to working in each day.

What will you be doing?

You will be working on a variety of exciting and challenging briefs from day one, and will get to work with some exceptional clients alongside a very talented and motivated team.

- Taking a front end developers HTML, CSS and JavaScript framework and integrating it into our chosen open source CMS using PHP code and a MySQL database.

- Integrating our open source CMS with various 3rd party software using provided API's.

- Work within a busy team to plan and develop reusable systems which are testable, modular and easy to use.

- Work with account managers and clients to define and clearly specify technical requirements for business interactions and business logic.

- Competently and accurately quote on requirements and specifications presented by account and project management.

- Provide an insight into technology and systems which are new, upcoming or not in use at the company to positively drive forward our systems and fellow developers alike.

Desired skills, attributes & experience

- Minimum 2 - 4 years commercial experience with PHP / MySQL.

- Commercial experience with MVC frameworks

- Commercial experience with PHP based platforms eg Zend, Symfony, Silverstripe

- Experience with package management tools eg Composer, Zypp

- Experience with source control tools such as Git

- Experience working with API's (REST, SOAP)

- Social personality who enjoys having a drink with your colleagues.
